

High-Tech Medicines: Quofenix 450mg Tablets

Tara Kelly MPSI writes, Quofenix tablets contain 450mg of the fluoroquinolone antibiotic delafloxacin and are indicated for the treatment of the following infections in adults:

Acute bacterial skin and
skin structure infections
(ABSSSI)

Community-acquired
pneumonia (CAP)

when it is considered inappropriate to use other antibacterial agents that are commonly used for the treatment of these infections.
